

NOTE: All preparations are diluted and then activated or energized by a special stirring process known as "dynamization."

Preparation	Purpose	What	Application Method
500	Promotes root activity and stimulates microbiotic life in the soil	Cow manure fermented in a cow horn, which is then buried and over-winters in the soil	Sprayed on the soil
501	Enhances light metabolism of the plant and photosynthesis processes	Ground quartz (silica) mixed with rain water and packed in a cow's horn, buried in spring and then dug up in autumn	Sprayed on the crop plants
502	Applied to compost along with preparations 503-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Flower heads of yarrow fermented in a stag's bladder	Applied to the compost
503	Applied to compost along with preparations 502-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Flower heads of chamomile fermented in the soil	Applied to the compost
504	Applied to compost along with preparations 502-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Stinging nettle tea	Applied to the compost. Nettle tea is also sometimes sprayed on weak or low vigor vines
505	Applied to compost along with preparations 502-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Oak bark fermented in the skull of a domestic animal	Applied to the compost
506	Applied to compost along with preparations 502-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Flower heads of dandelion fermented in cow mesentery	Applied to the compost
507	Applied to compost along with preparations 502-507. Together these control the breakdown of the manures and compost, helping to make trace elements more available to the plant	Juice from valerian flowers	Applied to the compost
508	Used as a spray to counter fungal diseases	Tea prepared from horsetail plant (Equisetum)	Vineyard spray
